

# ECCENTRIC REMOVAL SYSTEM

Safer - Faster - Smarter  
Crusher Maintenance

This cart is designed to eliminate rigging risks associated with the removal and replacement of the Hydroset and other eccentric components. This self powered cart positions itself under the crusher and provides bi-level access for personnel. The multi-stage hydraulic lift will raise to support the parts being replaced and safely lower them into the cart for transport. *No need for cable slings!*

**WE CAN RETRO-FIT YOUR EXISTING CART – WITH A HYDRAULIC LIFT!**

Since 1991, **Tri Star Design** has manufactured a wide array special tooling. We specialize in **increasing worker safety** and **reducing equipment downtime**. See our web site for more info: [www.TriStarDesign.net](http://www.TriStarDesign.net) 9/22/2016
